## **“SAVE AMERICAN INFORMATION TECHNOLOGY JOBS” POSTS REVIEW OF “SOLD OUT” ON AMAZON AND TO THE WORLD!**

---

Co-Founder of “Save American Information Technology Jobs” posts review of “Sold Out” on Amazon and to the World!

I just finished “Sold Out: How High-Tech Billionaires and Bipartisan Beltway Crapweasels Are Screwing America's Best and Brightest Workers”. This is the first comprehensive book of its kind describing the nightmare conditions that Information Technology Professionals have experienced for decades in regard to visa abuse, working conditions, unemployment and stress levels in today's Tech industry. I know, I work in the tech industry.

The level of detail and references in which the authors Michelle Malkin and John Miano, a programmer and who became an attorney, delve into and describe about the US Government's fraud ridden guest visa system and its adverse effects on US IT Citizens is amazing and shocking in its scope. The number of citations illustrates that the authors have done their homework. This is not a book that makes assertions without any supporting evidence. “Sold Out” describes how Corporate American and Congress that sells out American STEM and IT workers, and the book's narrative truths are more shocking than I previously thought possible.

As an American IT professional with almost 20 years industry experience I have seen first hand the negative impacts these visa loopholes have had on US IT workers and quite

frankly have witnessed the poor quality in software products as a result.

A colleague and I have established a Facebook Community page "Save American Information Technology Jobs" as a means of providing the American public with relevant news and first hand accounts of how the US Guest Visa system has allowed employers the opportunity to provide preferential treatment to foreign nationals while victimizing US Citizens. "Sold Out" places a huge spotlight on the US Visa guest worker system, calls out the corporate perpetrators by name and provides irrefutable evidence that the American public has been lead to believe a blatant LIE. THE TRUTH is that there is absolutely no shortage of "highly-skilled" US nationals in the job market. The H-1B visa system was instituted and implemented by corporate Crapweasels to obtain cheap labor in order to enrich themselves, this is the 1% turning the screw on the 99%, plain and simple. The American main stream media has been blinded by US corporate propaganda techniques - leading the American public largely ignorant. "Sold Out" is leading the charge to educate the media and thus the American public. That is why this book is so important. Once informed of the facts, public outrage is the result.

"Sold Out" is a must read book for IT professionals , families and friends of IT professionals, students studying Science, Technology, Engineering, and Math (STEM) occupations, and parents of students studying STEM professions. The various corporate lobbyists and congress and the executive branch of the US Government has stacked the deck against its own citizens - those best and brightest IT

engineers are forced into unemployment under the terms of training their own replacements - foreign guest workers from half way around the globe. A form of humiliation that is unacceptable and cruel to any one, in any profession, anywhere in this county; indeed any where in the world. I cannot think of any other country in the world that treats its own citizens in such a horrible fashion, a fashion of cruelty that the Disney Corporation as so well crafted.

John Miano and Michelle Malkin have performed a public service. Every US Citizen in IT, every college student studying STEM, and every parent paying for their children's education should give read this book. "Sold Out" brings home this horrific victimization to the national conversation. H-1B Visa reform is long overdue, and this book hopefully will serve as a platform for reform as the election cycle approaches, now is the time for change, American Information Technology is at a critical juncture. Are we as a nation going to turn over our technology to a group and foreign and inexpensive unqualified guest workers? Or are we going to continue to innovate and create the best world class technological systems? Are we going to stand up for American Information Technology Workers - a critical portion of middle class? Tech IT systems run our economy, it is the central nervous system for our institutions and corporate America and congress is currently destroying our STEM workers and the technological innovation of this county. Our US IT and STEM workers need jobs and our economy requires a stable and growing middle class that is not going to be "Sold Out".

Best Regards, Your Co-Founder - Identity to Remain Unknown.
